

Electronic Health Information (EHI) Export

File Formats

These are standardized computable formats. The export will include one or more of the below formats depending on set-up and use of the system by the agency.

- **XML**
Extensible Markup Language is a markup language and file format for storing, transmitting, and reconstructing data. It defines a set of rules for encoding documents in a format that is both human-readable and machine-readable.
- **CSV**
A comma-separated values (CSV) file is a delimited text file that uses a comma to separate values. Each line of the file is a data record. Each record consists of one or more fields, separated by commas. The use of the comma as a field separator is the source of the name for this file format.
- **PDF documents**
Portable Document Format, is a file format to present documents, including text formatting and images, in a manner independent of application software, hardware, and operating systems.
